

ACCELERATED OPERATIONS

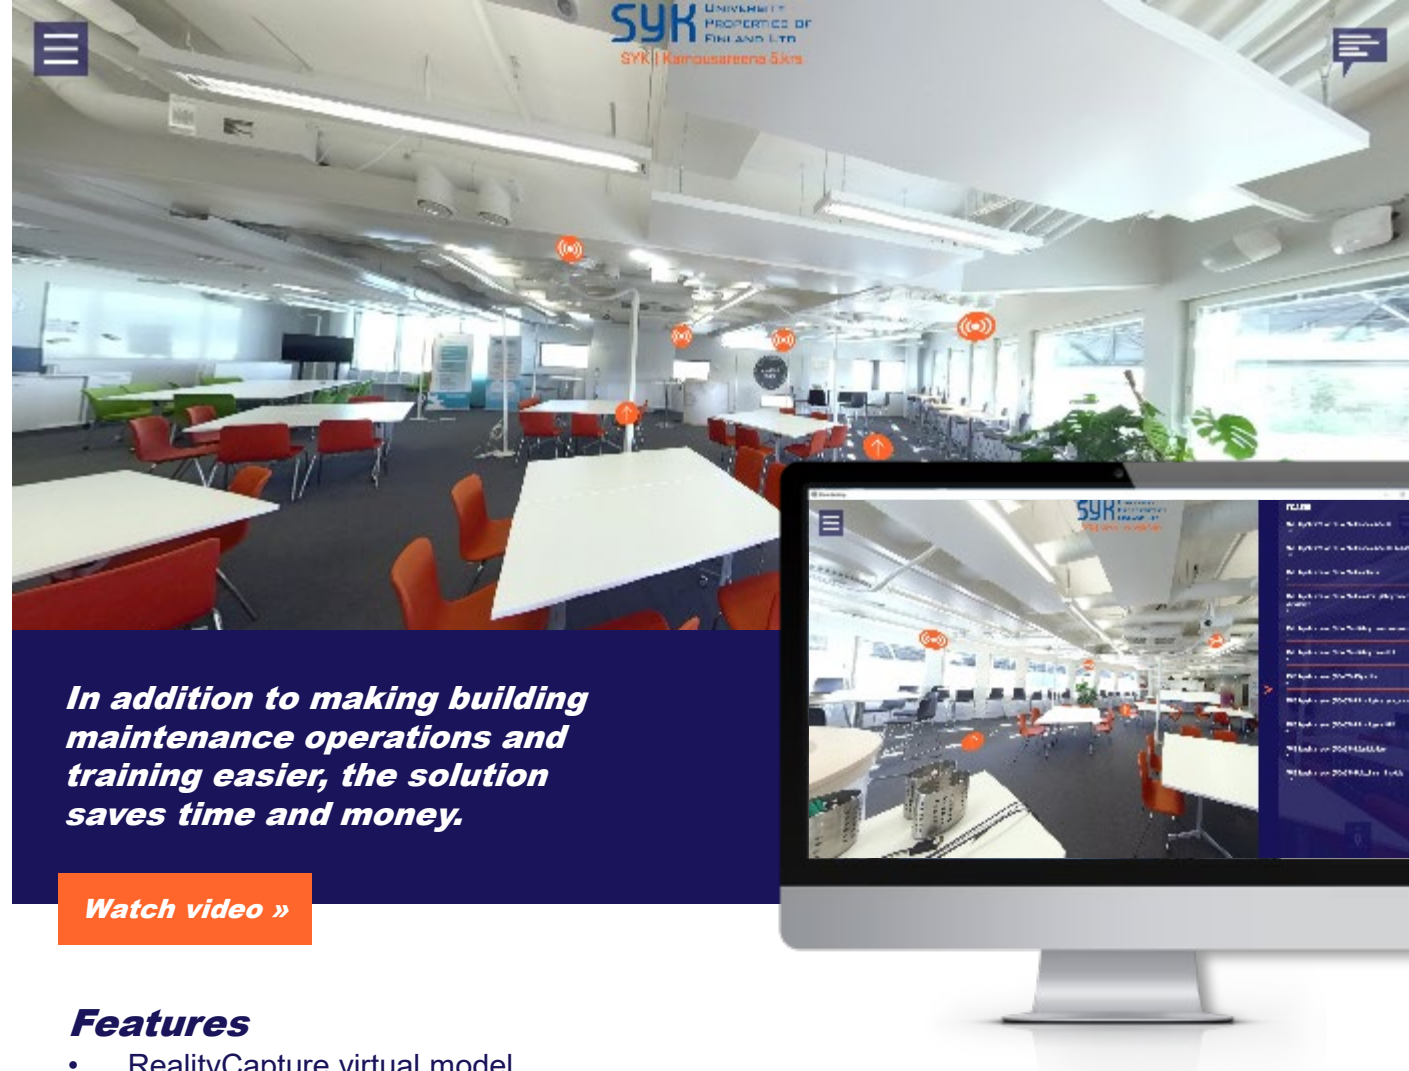

Property data optimizes maintenance operation

Rejlers produced a solution for University Properties of Finland which takes sensor produced property data where it is most needed, with the help of a 360° view and an AR solution.

Rejlers Accelerated Operations solution combines digital twin with real-time data and augmented reality. Completed in early 2018, the solution combines all property data into one system, which makes building maintenance operations and employee training more efficient.

- + Reducing errors in operations
- + Fast information retrieval and real-time monitoring
- + Supports decision making with essential property information
- + Speeds up employee training in actual working facilities

REJLERS

*In addition to making building
maintenance operations and
training easier, the solution
saves time and money.*

Features

- RealityCapture virtual model
- Augmented reality interface for mobile devices, desktop version for PC
- Point-of-Interest data points
 - IoT sensors
